GB INSTRUCTION

PS-360-20IW/PS-360-20IB
INFRARED PRESENCE DETECTOR

Welcome to us PS-360-20IB Infrared Presence detector! Congratulations on purchasing your new detector and thank you for the confidence you have shown in us. You have chosen a high-quality product that has been manufactured, tested and packed with the greatest care. Please familiarize yourself with these instructions before attempting to install the product because prolonged, reliable and trouble-free operation will only be ensured if it is fitted and used properly. We hope your new detector will bring you lasting pleasure.

SPECIFICATION:

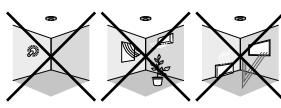

Power Source:	220-240V/AC
Detection Range:	360°
Power Frequency:	50/60Hz
Detection Distance:	20m max(+24°)
Ambient Light:	<3-2000LUX (adjustable)
Working Temperature:	-20~+40°C
Time Delay:	Min.10sec±3sec Max.30min±2min
Working Humidity:	<93%RH
Power Consumption:	approx.0.5W
Rated Load:	Max: 2000W; LED: 1000W
Installation Height:	2.2-6m

FUNCTION:

- Can identify day and night: The consumer can adjust working state in different ambient light. It can work in the daytime and at night when it is adjusted on the "sun" position. (It can work in the ambient light less than 3LUX, when it is adjusted on the "3" position (min). As for the adjustment pattern, please refer to the testing pattern.
- Time-Delay is added continually: When it receives the second induction signals within the first induction, it will restart to time from the moment.

INSTALLATION ADVICE:

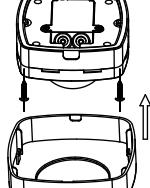

- As the detector responds to changes in temperature, avoid the following situations:
- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
 - Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
 - Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

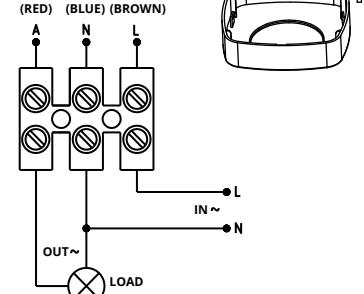

CONNECTION:

WARNING!	Warning: Danger of death through electric shock!
	<ul style="list-style-type: none"> • Must be installed by professional electrician. • Disconnect power source. • Cover or shield any adjacent live components. • Ensure device cannot be switched on. • Check power supply is disconnected.

- Unload the cover directly.
- Connect the power and the load into the connection-wire column of the detector according to connection-wire diagram.
- Fix the detector on the selected position with the inflated screw as the figure on the right.
- Install back the cover and then you can test it.

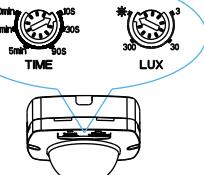

CONNECTION-WIRE DIAGRAM:

TEST:

- Turn the TIME knob anti-clockwise on the minimum (10s). Turn the LUX knob clockwise on the maximum (sun).
- Switch on the power, the detector and its connected lamp will have no signal at the beginning. After Warm-up 30sec, the detector can start work. If the detector receives the induction signal, the lamp will turn on. While there is no other induction signal any more, the load should stop working within 10sec±3sec and the lamp would turn off.
- Turn LUX knob anti-clockwise on the minimum (3). If the ambient light is more than 3LUX, the detector would not work and the lamp stop working too. If the ambient light is less than 3LUX (darkness), the detector would work. Under no induction signal condition, the detector should stop working within 10sec±3sec.

Note: when testing in daylight, please turn LUX knob to "SUN" position, otherwise the sensor lamp could not work! If the lamp is more than 60W, the distance between lamp and sensor should be 60cm at least.

SOME PROBLEM AND SOLVED WAY:

- The load do not work.
 - a. Please check if the connection-wiring of power and load is correct.
 - b. Please check if the load is good.
 - c. Please check if the working light sets correspond to ambient light.
 - d. The sensitivity is poor.
 - a. Please check if there has any hindrance in front of the detection window to affect to receive the signal.
 - b. Please check if the ambient temperature is too high.
 - c. Please check if the induction signal source is in the detection fields.
 - d. Please check if the installation height corresponds to the height showed in the instruction.
 - e. Please check if the moving orientation is correct.
 - f. The sensor can not shut off the load automatically.
 - a. Please check if there is continual signal in the detection field.
 - b. Please check if the time delay is the longest.
 - c. Please check if the power corresponds to the instruction.

DE DER ANLEITUNG

PS-360-20IW/PS-360-20IB DER INFRAROT-PRÄSENZSENSOR

Bitte machen Sie sich mit diesen Anweisungen vertraut, bevor Sie das Produkt installieren, da andauernder, zuverlässiger und störungsfreier Betrieb nur dann gewährleistet wird, wenn es ordnungsgemäß eingebaut ist und verwendet wird.

SPEZIFIKATION:

Stromquelle:	220-240V/AC
Erfassungsbereich:	360°
Stromfrequenz:	50/60Hz
Erfassungsbereich:	20m max(+24°)
Umgebungslicht:	<3-2000LUX (einstellbar)
Betriebstemperatur:	-20~+40°C
Zeitverzögerung:	Min.10sec±3sec Max.30min±2min
Betriebsfeuchtigkeit:	<93RH
Leistungsaufnahme:	ca. 0.5W
Rated Load:	Max: 2000W; LED: 1000W
Installationshöhe:	2.2-6m

FUNKTION:

- Kann tag und Nacht identifizieren: Der Nutzer kann den Betriebszustand an unterschiedlichen Umgangssprachen anpassen. Kann tagsüber und während der Nacht arbeiten, wenn die LUX-Schalter die Position "Sun" (Max) eingesetzt ist. Er kann bei Umgebungslicht von weniger als 3LUX arbeiten wenn er auf die Position "3" (Min.) eingestellt ist. Das Testmuster als Einstellmuster benutzt.
- Eine Zeitverzögerung wird kontinuierlich hinzugefügt: Wenn das zweite Induktionsignal während des ersten Induktionssignals empfangen wird, wird das Gerät neu starten, um sich dem Moment anzupassen

INSTALLATIONSHINWEIS:

Da der Sensor auf Temperaturschwankungen reagiert, vermeiden Sie die folgenden Situationen:

- Vermeiden Sie eine Ausrichtung des Detektors auf Gegenstände mit reflektierenden Oberflächen, wie Spiegel, usw.
- Vermeiden Sie die Montage des Detektors in der Nähe von Wärmequellen, wie Entlüftungsöffnungen von Heizungen, Klimaanlagen, Leuchtmitteln, usw.
- Vermeiden Sie eine Ausrichtung des Detektors auf Gegenstände, die sich im Wind bewegen können, wie Gardinen, hohe Pflanzen, usw.

INSTALLATIONSHINWEIS:

Da der Sensor auf Temperaturschwankungen reagiert, vermeiden Sie die folgenden Situationen:

- Vermeiden Sie eine Ausrichtung des Detektors auf Gegenstände mit reflektierenden Oberflächen, wie Spiegel, usw.
- Vermeiden Sie die Montage des Detektors in der Nähe von Wärmequellen, wie Entlüftungsöffnungen von Heizungen, Klimaanlagen, Leuchtmitteln, usw.
- Vermeiden Sie eine Ausrichtung des Detektors auf Gegenstände, die sich im Wind bewegen können, wie Gardinen, hohe Pflanzen, usw.

INSTALLATIONSHINWEIS:

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

INSTALLATION ADVICE:

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting the detector near heat sources, such as heating vents, air conditioning units, light etc.
- Avoid pointing the detector towards objects that may move in the wind, such as curtains, tall plants etc.

As the detector responds to changes in temperature, avoid the following situations:

- Avoid pointing the detector towards objects with highly reflective surfaces, such as mirrors etc.
- Avoid mounting

LT INSTRUKCIJA

PS-360-20IW/PS-360-20IB
INFRARAUODONUJU SPINDULIU
BUVIMO JUTIKLIS

Pries bandymais montuoti gaminius gerai susipažinkite su šiuo naudotojo vadovu, nes tik tvarkingu sumontuotais ir naudojamas renginius veiks ligai ir patikimai.

SPECIFIKACIJA:

Matinimo Salmčių:	220-240V/AC
Aptikimo diapazonas:	360°
Matiavimo dažnis:	50/60Hz
Aptikimo atstumas:	20m max(<24°C)
Aplinkos apšvietimas:	<3-2000LUX (reguliuojamas)
Dabarine temperatūra:	-20°C +40°C
Delta:	Min.10sec+3sec Max.30min+2min
Dabarine dregmė:	<93RH
Energijos sovortojimas:	aprikininko 5W
Montavimo auksčis:	Max: 2000W; LED: 1000W
Irenginio aukštis sienos:	2.2-6m

FUNKCIJA:
• Galia aptinkti dieną ir naktį; Naudotojai galia reguliuoti veikimo būseną, esant skirtiniams aplinkos apšvietimui. LIUKS! rankenėle nustatius ties „saule“ (maks.), jis galia išdėmes metu arba nakti. Jis galia kilti, kai aplinkos apšvietimas mažiau kaip 3 LIUKS!, nustatūs „3“ padėtį (min). Reguliavimo modelį nustatyti pagal padalinį modelį.

• Nuolat priedama delta: Pirmosios indukcijos metu gavęs antrosios indukcijos signalus, jis iš karto paleidžiamas iš naujo.

MONTAVIMO PATARIMAS:

Kadangi aptinktu reaguoja į temperatūros polycyjus, venkite šių situacijų:

• Nenukreipti aptinktu į objektus su itin atspindintais paviršiais, pvz., veidrodžius ir pan.

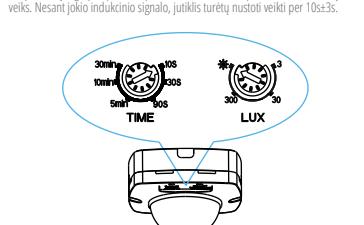

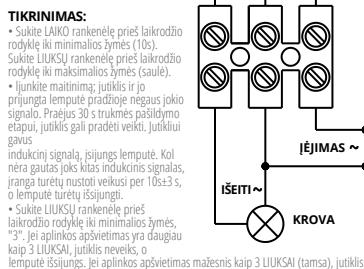

• Nemontuokite aptinktu netoli šilumos Šaltinių, pvz., šildymo ventiliacijos angų, oro kondicijos įrenginių, apšvietimo ir pan.

• Nenukreipti aptinktu į objektus, kurie juda pučiant vėjui, pvz., užuolaidas, aukštus augalus ir pan.

JUNGIMAS:

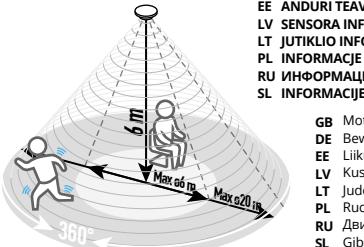

ISPĖIJIMAS!	Įspėjimas. Pavojus žutti nuo elektros smūgio!
	• Elektros instalacijai turi atlikti profesionalus elektrikus.
	• Atnirkite matinimo Šaltini.
	• Uždenkite arba venkite greta esančių komponentų, kuriais teka srovė.
	• Užtinkrinke aptinktu, kad neįgino nebūs galima įjungti.
	• Patirkinkite, ar atjungtas matinimo Šaltinis.

Pastaba: tikrindami dienos metu, LIUKS! rankenėle pasukite iki (SAULE) padėties, anai gal neveiki jutiklio lempelė Jei lempėtė yra daugiau kaip 60 W, atstumas tarp jų turi būti bent 60 cm.

KAI KURIOS PROBLEMS IR JŲ SPRENDIMO BŪDAI:

- Neveikia įrangą.
a. Patirkinkite, ar tinkamai prijungtais matinimo Šaltinius ir įrangą.
b. Patirkinkite, ar įrangos tankumas būklės.
c. Patirkinkite, ar darbinis apšvietimas nustatytas pagal aplinkos apšvietimą.
d. Prastai įtvarumas:
a. Patirkinkite, ar priešas aptinktu nera jokių trukdų, kliudančių primti signalus.
b. Patirkinkite, ar aplinkos temperatūra nera per aukšta.
c. Patirkinkite, ar indukcinio signalo Šaltinis yra aptinkto lauke.
d. Patirkinkite, ar montavimo aukštis sutampa su instrukcijos nurodytu aukštumi.
e. Patirkinkite, ar tinkama įdiejimo padėtis.
f. Jutiklis negali automatiškai įjungti įrangos:
a. Patirkinkite, ar aptinkto lauke signalas yra pastovus.
b. Patirkinkite, ar nustatyta maksimali delta.
c. Patirkinkite, ar galia atitinka nurodytą instrukciją.
