Length	83 mm
Width	83 mm
Depth	73.5 mm
Cut hole Ø	83 mm
Tube entries up to M25	2
Combination	1x1
Dispatch	10

Fire-protection boxes are given the same period of fire resistance in fire-protection walls in spite of fitted electrical installations and ensure secure, smokeproof room separation. In the event of a fire, an integrated fire retardant quickly and reliably closes the installation opening and prevents flames and flue gases from escaping. This ensures that lives are saved and material goods are efficiently protected.

- For fire protection walls
- Retrofitting is possible
- For directly opposing installation
- Can be used with fire-protection cover as a junction box

does not match with the following types:
